

OPHTHALMIC Product Guide

A JOBSON PUBLICATION • VOLUME 22 / NUMBER 2

Dear Doctor:

Review of Ophthalmology is pleased to offer you this preview of many exciting new products now available in the ophthalmic marketplace. In the pages to follow, you'll learn about innovative new medications, diagnostic instruments, corrective lens options, in-office laboratory equipment and many other new products. Now there are two ways to obtain more information on a particular product:

1. Go to reviewofophthalmology.com, click Supplements, Product Guide digital edition and follow the prompts.
2. Circle the corresponding number on the enclosed reader service card for each product of interest to you. Fill in your name and address. Return the postage-paid card to us. Educational materials will be sent directly to you by the individual companies.

Thank you for your interest and support!

TOPCON ALADDIN BIOMETER / TOPOGRAPHER

The Aladdin is a multi-functional instrument that combines a series of measurements to assist eye surgeons in the calculation of IOL power. The Aladdin combines Axial Length, Corneal Topography, Pupillometry, Corneal Diameter and Anterior Chamber Depth in one single instrument, assisting the Eye Surgeon not only in conventional IOL power calculation but also in his or her choice of the right premium IOL for each individual eye. The built-in full Placido topography system offers all the additional diagnostic capabilities of any stand-alone topographer.

TOPCON SYNERGY™ ODM OPHTHALMIC DATA MANAGEMENT SYSTEM

The Synergy™ ODM Ophthalmic Data Management System integrates images and reports from Topcon and over 130 other manufacturers' systems into a single, secure, digital environment. With the ability to view, compare, annotate and transmit patient images seamlessly and securely, Synergy™ ODM provides for fluent workflow efficiency and helps the transition to a paperless environment. The web-based system allows for rapid access to patient information, anytime, from virtually anywhere, including workstations and remote computers. Designed as a scalable and flexible solution, Synergy™ ODM integrates with most EMR's, is fully standards compliant and scalable to fit any size practice.

TOPCON KR-1W WAVERONT ANALYZER

The 5-in-1 KR-1W Wavefront Analyzer from Topcon combines wavefront aberration, corneal topography, auto-refraction, keratometry, and pupillometry all in one unit! The system is extremely easy to operate, featuring auto alignment and measurement, a large color touch screen, and invisible light measurement for added patient comfort. The onboard evaluation software with multiple map displays provides valuable pre- and post-op data for cataract and refractive procedures. The system is fully networkable in various configurations.

TOPCON 3D OCT-2000 SPECTRAL DOMAIN OCT

The Topcon 3D OCT-2000 System is the first Spectral Domain OCT system to incorporate a high-resolution fundus camera and a user-friendly color touch screen display in a compact, space-saving design. The easy-to-use, intuitive FastMap™ software enables dynamic viewing of the OCT data, providing 3D, 2D and fundus images simultaneously. Pin-Point™ Registration properly indicates the location of the OCT image within the fundus image. In addition, the compare function allows users to view serial exams in a comparison view and apply different analytical tools. The seamless integration of the 3D OCT-2000 with Topcon's Synergy™ Ophthalmic Data Management System provides true connectivity and access to images anywhere, anytime.

TONOSAFE® Tonometry Prisms

Speed up exams. Cut infection risk.

Tonosafe disposable prisms eliminate the risk of cross-infection. They easily snap over the tips of the Goldmann applanation tonometers, or Perkins tonometers. The prisms are developed for single patient use and only take a moment to position. Calibrated to Goldmann standards, the Tonosafe is the same mass as the Goldmann prism so no conversion of results is necessary.

LENSTAR® Optical Biometer

Advanced biometry—better outcomes

The LENSTAR is the first optical biometer of the entire eye. It delivers exceptionally accurate axial length, anterior chamber depth and lens thickness by optical biometry. The dual zone keratometry with 32 measurement points provide precise K values, essential for planning toric lens implantation. With its integrated Olsen and Barrett formulas, two of the latest generation multivariable IOL calculation methods, the LENSTAR provides the user with the best possible IOL prediction.

BM 900® Slit Lamp

The class slit lamp microscope—
enduring performance

The Haag-Streit BM 900 has been the standard in modern slit lamp microscopy for almost 50 years – and still is! Over 100,000 professionals all over the world who own a BM 900 agree that it was the best investment they ever made for their practice. The BM 900 offers convergent optics for brilliant views as well as two “workhorse” magnifications of 10x and 16x. The short observer to patient distance and excellent optics guarantees fatigue free daily use. It has the brightest illumination available on a slit lamp and supplies LED-Power for more details.

IVUE AND IFUSION

iVue and iFusion deliver high-quality retinal imaging and powerful clinical applications from the front of the eye to the back.

The iVue SD-OCT includes a full suite of retina, optic nerve and anterior segment scans to aid in the diagnosis and management of a range of ocular disease.

iFusion combines the iVue SD-OCT with the iCam fundus camera into a single instrument to save time and space for optimal practice efficiency. And iFusion offers an excellent return on investment with five billable scans. Both systems include the proprietary iWellness scan, which provides valuable information to aid in the early detection of retinal disease while providing a new income stream to offset the cost of the instrument.

ISCAN

The iScan software-assisted OCT system delivers the ultimate in ease-of-use.

1. Enter the patient's information
2. Position the patient
3. Press start

iScan vocally guides the patient through the entire exam.

iScan's software-assisted platform make it ideal for offices with limited staff resources. Operating iScan is simple, requires minimal training and delivers consistent scan acquisition. The system's compact footprint and tabletop design offer the flexibility to place iScan in any room in the practice. iScan is offered in two configurations: iScan Essential and iScan Comprehensive.

THE LATEST TRS AUTOMATED REFRACTION SYSTEM

The TRS-5100 is controlled with a programmable keypad, and when connected to the OPD-Scan III, delivers refractions in a fraction of time it takes with traditional methods. The time saved in collecting data provides more time for patient consults and optical. It allows the patient to simultaneously view their old and new Rx selections including day and night vision differences. The TRS makes your life easier and more efficient—while giving the patients a faster more accurate and positive exam experience. This entire refraction process increases staff efficiency, maximizes patient flow, and increases overall practice revenue and referrals. The TRS is equipped with “Marco Connect” SM software and is EHR/EMR compatible.

Circle No. 65

OPD-SCAN III

Beyond the ability to gather an autorefractometer, keratometry, pupillometry, corneal topography and wavefront aberrometry in ~10 seconds per eye, the OPD-Scan III adds over 20 diagnostic features never before in one combined workstation.

- Angle Kappa for multi-focal implants
- Retro illumination image displays cataracts, post-op toric IOL alignment, haptics, etc...
- SA of Cornea for Aspheric IOL selection
- Average Pupil Power for post LASIK calculations (APP on ASCRS IOL calculator)

Choosing the right IOL for your patients based on their visual system leads to better outcomes.

INTRODUCING THE ONLY AUTOREFRACTOR / AUTOKERATOMETER WITH GLARE TESTING!

The Marco ARK-1s is the only autorefractor/autokeratometer with glare testing! You can now measure and document vision loss due to glare and also test for low contrast, accommodation, and retro-illumination. The new faster and more automated ARK-1s has enhanced features including advanced SLD technology making measurement of patients with dense cataracts possible, incorporating (for the first time) a multiple pupil, zonal ring image method. The ARK-1s has fully automatic alignment, tracking, and focusing ability and can perform a spherical refinement as well as unaided visual acuity. The additional ergonomic design enhancements provide greater comfort for both operator and patient.

INSIGHT VISUAL ACUITY SYSTEM

The InSight Visual Acuity System is an innovative solution to your acuity needs. It's the first LCD Acuity that does not require a PC! Not only do you get all your standard charts & tests, but the system includes animation. The charts can be set to randomize for patients who may have memorized the chart. In addition, you now have the option of a static chart, this chart presents the same opto types from your typical manual projector and does not randomize.

REVIEW[®] of Ophthalmology

ENRICH YOUR PRACTICE

Review of Ophthalmology delivers current and comprehensive information focusing on topics such as disease diagnosis, surgical techniques and new technologies.

The *Review Group's Ophthalmic Product Guide* brings you the latest products and technology on the market. Published every February and July.

The *Review Group* also distributes a variety of supplements, guides and handbooks with your subscription to *Review of Ophthalmology*. These publications are designed to keep you informed on what's new and innovative in the industry on topics ranging from cataract refractive surgery to ocular surface disease.

The *Review Group* also offers valuable continuing medical education sessions in both print and online formats, allowing a convenient way for you to earn CME credits. In addition, we also offer an impressive fleet of free e-newsletters—such as *Review of Ophthalmology Online* and *Review of Ophthalmology's Retina Online*—so you can keep up to date on breaking news and the latest research.

The *Review Group* also spearheads meetings and conferences, bringing together experts in the field and providing a forum for practitioners that allows you to educate, and learn from others in the profession. These meetings cover a broad range of topics in the form of educational or promotional roundtables and forums.

MAIA represents the latest advancement in confocal microperimetry. MAIA functionally characterizes a variety of macular pathologies by collecting both anatomical and functional data. The exclusive eye-tracking capability ensures consistent patient fixation throughout the test. By measuring the exact same locations with the same projection as in the baseline test, independent of fixation shifts, MAIA is the indispensable tool for monitoring patient pathology and titrating therapy.

**OCULUS PARK 1®
(PACHY+AUTOREF+KERATOMETER)**

Put your practice in overdrive with the OCULUS PARK 1®, the only diagnostic instrument to combine an Auto-Refractometer with a non-contact Pachymeter and a Keratometer, all in one. Sleek, slim, ergonomically designed and attractively priced, the PARK 1® uses proven, cutting-edge Scheimpflug technology. EMR ready.

OCULUS PENTACAM®

Complete examination of the anterior segment is now more affordable with the OCULUS Pentacam®. In less than 2 seconds, the Pentacam® provides the topography and elevation maps for the front and back surface of the cornea and non-contact pachymetry data. Additional software modules provide Anterior Chamber Depth (ACD), chamber angles and volume information, early Keratoconus detection capability and more. EMR ready.

TOPCON TRC-NW400 NON-MYDRIATIC RETINAL CAMERA

The Topcon TRC-NW400 is a fully automated, easy-to-use, non-mydratic retinal camera that is designed to obtain high-resolution color images of the retina and the anterior segment of the human eye. It is equipped with automatic focusing and capture and a fully automated mechanism that moves the optical head from one eye to the other without operator intervention. The TRC-NW400 features a large 10" color touch screen and 9 internal fixation targets for wide-angle compositions of the retina. The TRC-NW400 can be used as a stand-alone unit or in conjunction with a remote server or EMR system. It is DICOM compliant and also available with the optional Topcon IMAGeNet® 5 digital imaging software.

EIDON - THE FIRST TRUE-COLOR CONFOCAL SCANNER

The first system to combine the advantages of SLO with the fidelity of true color imaging, EIDON enables analysis of real retinal appearance versus pseudo-color renderings.

- Unsurpassed image quality with greater contrast than traditional fundus imaging
- Non-myd down to 2.5mm pupil
- Preserved quality with media opacities (cataracts)
- Wide Field Mosaic (110°); 60° standard FOV
- True-color, Red-free and Infrared
- Fully automatic with user friendly tablet
- Remote viewing with wired and Wi-Fi
